MAAZ AHMED

[✉ maazad1833@gmail.com](mailto:maazad1833@gmail.com)

github.com/maazehmad

in <http://linkedin.com/in/maazad1833/>

Languages & Frameworks: Python, SQL (MySQL), PyTorch, TensorFlow, Scikit-learn, OpenCV, Ultralytics YOLO

Core Skills: Machine Learning, Computer Vision, Deep Learning, Agentic AI, MLOPs, Data Analysis, Database, Data Visualization

Tools & Platforms: Power BI, Excel, Tableau, D3.js, Git, Linux, AWS Cloud, Docker, MLflow, Rest APIs, Grafana

SUMMARY: Data Science graduate with experience spanning Computer Vision and Machine Learning, alongside hands-on work and interests across MLOps, Agentic AI, and Data Engineering. Experienced in developing intelligent computer vision systems, building scalable end-to-end ML pipelines, and deploying production-ready AI solutions using modern engineering practices across cloud and edge environments for real-world applications.

EDUCATION

Bachelors of Science in Data Science, FAST NUCES ISLAMABAD

Aug 2022-June 2026

EXPERIENCE

Industry-Sponsored Computer Vision Engineering Project (NESCOM & AWC)

Hybrid | Aug 2025-May 2026

- Collaborated with NESCOM and AWC to develop a real-time drone-based Computer Vision system for automated detection and localization of strategic ground targets, providing an alternative to conventional GPS-dependent navigation.
- Designed and implemented aerial object detection pipelines using YOLO and Faster R-CNN, integrating feature-matching techniques to improve infrastructure identification and localization accuracy.
- Developed an end-to-end drone video analytics pipeline with CSRT tracking, optimizing deployment on NVIDIA Jetson Orin Nano to achieve approximately 30 FPS real-time inference while reducing latency for embedded edge applications.

MENTOGA - Machine Learning Engineering Internship

Remote | July 2025-Aug 2025

- Developed machine learning models for sentiment analysis and recommendation systems, applying advanced feature engineering, hyperparameter tuning, and comprehensive model evaluation to improve predictive performance.
- Collaborated in an agile development environment to build scalable, production-oriented machine learning solutions using Git-based workflows and industry-standard software engineering practices.

PROJECTS

Agentic Startup Launch Platform

- Built an AI-powered multi-agent platform that transforms startup ideas into structured software projects by generating technical specifications, development roadmaps, initial project files, functional website frontends, and deploying projects to GitHub.
- Designed a CEO-led agent orchestration workflow using Python and Groq API, integrating GitHub to automate project scaffolding, repository creation, and code deployment, accelerating the transition from startup ideation to functional product development.

Data Warehouse and ETL Pipeline Project

- Designed and implemented a scalable data warehouse with dimensional modeling (fact and dimension tables), enabling efficient business intelligence reporting and faster analytical querying across integrated data sources.
- Developed optimized ETL pipelines and SQL-based data transformations, improving data reliability and supporting scalable KPI dashboards for data-driven decision-making across multiple business domains.

End-to-End MLOps Pipeline for Heart Disease Prediction

- Built an end-to-end Heart Disease Prediction pipeline using Python, FastAPI, MLflow, and Docker, enabling reproducible model development and scalable REST API deployment for machine learning applications.
- Integrated Prometheus monitoring and Docker-based containerization, enhancing model observability, deployment reliability, and operational monitoring in production-oriented ML workflows.

CERTIFICATION: Machine Learning by Stanford University | Agentic AI with LangChain and LangGraph by IBM
Python for Data Science AI and Development by IBM
