MAAZ AHMED

DATA SCIENTIST

github.com/maazehmad
linkedin.com/in/maazad1833/

Languages & Frameworks: Python (Pandas, NumPy, Scikit-learn, TensorFlow), SQL (MySQL), OpenCV, Ultralytics YOLO

Core Skills: Data Analysis, Machine Learning, Deep Learning, Computer Vision, Agentic AI, Data Visualization, Database, MLOPs, ETL

Tools & Platforms: Power BI, Excel, Tableau, D3.js, Git, Linux, AWS Cloud, Docker, MLflow, Rest API, Grafana

SUMMARY:

Data Science professional with hands-on experience in machine learning, deep learning, and data engineering, focused at building end-to-end data and AI solutions. Skilled in computer vision systems, ML pipeline development, and cloud-based model deployment. Driven to turn complex data into scalable, intelligent systems that solve real-world problems

EDUCATION

Bachelors of Science in Data Science, FAST NUCES ISLAMABAD

Aug 2022-June 2026

EXPERIENCE

Industry Sponsored Computer Vision Engineering Project (NESCOM & AWC)

Hybrid | Aug 2025-May 2026

- Collaborated with NESCOM and AWC on a drone-based real-time infrastructure detection system
- Designed and implemented aerial object detection pipelines using YOLO and Faster R-CNN, integrating feature-matching techniques for accurate infrastructure identification and localization.
- *Developed an end-to-end drone video analytics pipeline with CSRT tracking, optimizing deployment on NVIDIA Jetson Orin Nano to achieve approximately 25 FPS real-time inference while reducing latency for embedded edge environments.*

MENTOGA - Machine Learning Engineering Internship

Remote | June 2025-Aug 2025

- Implemented machine learning models for sentiment analysis and recommendation systems using advanced data techniques.
- Designed end-to-end pipelines including data cleaning, feature engineering, model training, validation, and model evaluation.

PROJECTS

LAUNCH MIND | Autonomous Multi-Agent Startup Launch System

- Built an AI-powered multi-agent startup launch platform using Python and Gemini API to transform startup ideas into product specifications, landing pages, marketing content, QA reports, and launch-readiness assessments.
- Designed a CEO-led agent orchestration workflow integrating GitHub, Slack, and Gmail SMTP to automate PR creation, real-time team coordination, stakeholder notifications, and end-to-end startup launch operations.

DATA WAREHOUSE AND ETL PIPELINE PROJECT

- Designed and implemented a scalable data warehouse architecture with dimensional modeling (fact and dimension tables), enabling efficient analytical reporting and business intelligence workflows across multiple data sources.
- Developed and optimized ETL pipelines and SQL-based data transformations to ensure data quality, integrity, and high-performance querying for KPI-driven dashboards and advanced analytics use cases.

End-to-End MLOps Pipeline for Heart Disease Prediction

- Built an end-to-end Heart Disease Prediction pipeline using Python, FastAPI, MLflow, and Docker, implementing data preprocessing, model training, experiment tracking, and REST API deployment for scalable machine learning applications.
- Integrated Prometheus monitoring, containerized the application with Docker, and deployed reproducible ML workflows with automated model serving, logging, performance evaluation, and real-time metrics collection.

CERTIFICATIONS

- Coursera: Python for Data Science AI and Development by IBM
- Coursera: Machine Learning by Stanford University
- Coursera: Agentic AI with LangChain and LangGraph by IBM
